

AhnLab EPP

Optimized Endpoint Protection Platform

Enables Unified Management via an Integrated Management Console with a Single Agent

AhnLab EPP is an endpoint protection platform for optimized interoperation and integrated management of diverse security functions. AhnLab EPP provides a stronger response against threats than point solution-based responses by providing centralized endpoint security management and operation. AhnLab EPP is based on a single agent and management console, providing integrated management and operation of various AhnLab endpoint security solutions, such as AhnLab EDR and V3, AhnLab's anti-malware product.

Advantages

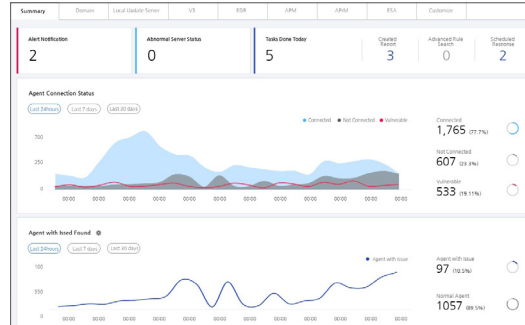

AhnLab EPP provides various functions for efficient security operations and unified threat response.

Simple management with a single web-based management console	Unified threat monitoring and response through the integration of endpoint security products
Optimized security controls by supporting integrations with third-party solutions via automated syslogs	Flexible deployment and scalability with module-based components
Automated collection of endpoint threat information through a single agent	Operational stability via load balancers

AhnLab EPP enables seamless endpoint protection by an integrated operation of various security solutions. Businesses can implement the management system according to each specific business environment and security requirements with AhnLab EPP.

Simple Deployment and Operation

- Provides efficient security management by integrated settings and operations
- Enables immediate use of various AhnLab endpoint security solutions by license plug-in
- Allows operational convenience through a web-based management console with various management functions
- Provides user-friendly, intuitive dashboards
- Provides convenient functions for security administrators, such as user-defined reports

Web-based Management Console of AhnLab EPP

Integrated Threat Response

- Provides connected rules and responses applicable to all AhnLab endpoint security products, including V3, AhnLab's anti-malware software, and AhnLab EDR
- Supports report creation for set conditions, response commands, exceptions, designated groups or rules

Advanced Rule Settings

Integrated Response Settings

Flexibility and Stability

- Provides software based solution, which is easy-to-deploy and flexible-to-expand
- Enables deployment according to business scale and IT environment
- Employs scale-out method to easily add or expand server
- Supports module based deployment enabling flexible and limitless attachment
- Provides operational stability through load balancers, which enables prevention and distribution of overloads across module
