

AhnLab AI

Transforming Security Operations with Agentic AI

AhnLab AI PLUS is AhnLab's AI security platform, built around a unified AI strategy. It brings together AhnLab's technology, products, data and services through AI to address customers' security challenges.

AI-driven cyber threats are growing in speed and scale. Security teams need to connect data across domains to quickly identify the risks that matter, understand why they matter and take action. AhnLab AI PLUS combines AI with AhnLab's technologies, products, platforms, and operational expertise accumulated over more than 30 years, increasing both the speed and scale of security operations.

See What Matters

Identify the most critical threats and risks among countless alerts

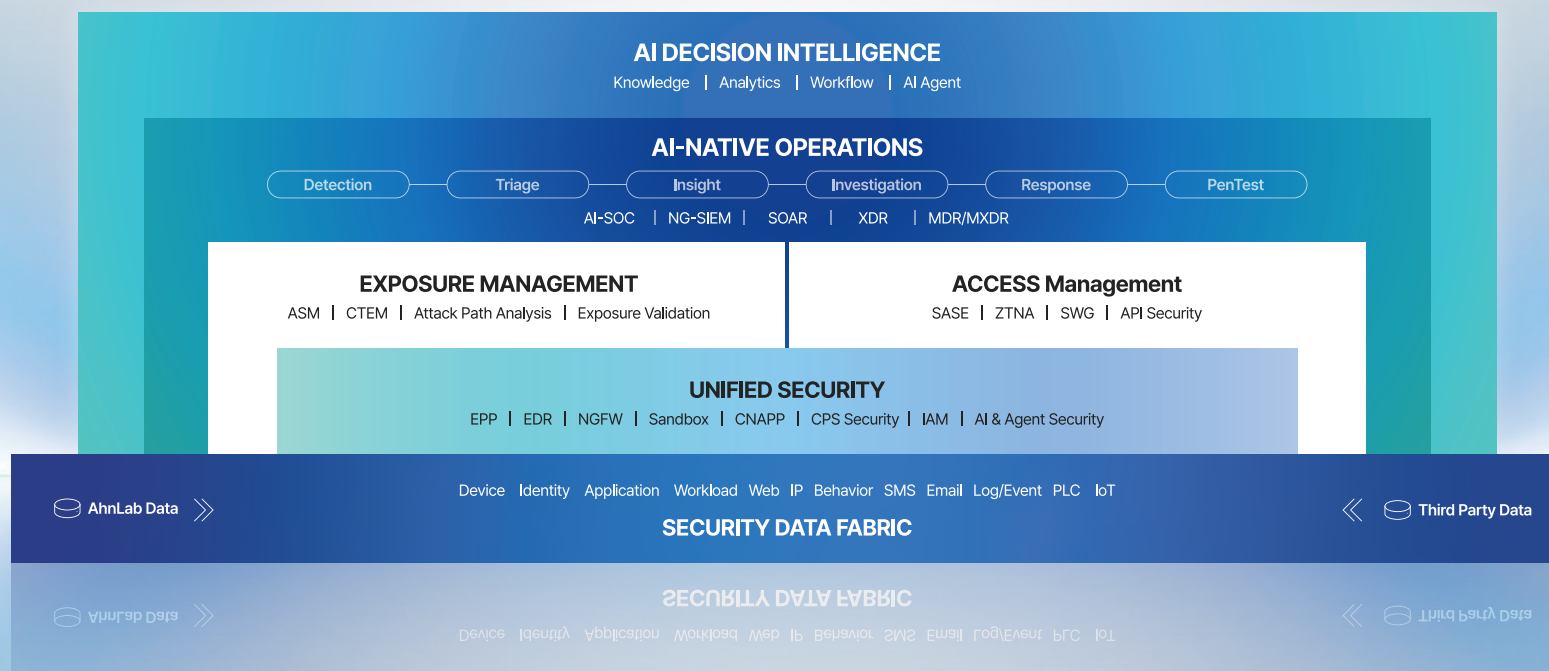

Understand Faster

Quickly assess the risk and identify affected assets and users

Act with Confidence

Act promptly based on recommended investigation and response

Redefining Cybersecurity with Intelligent AI

The goal of AhnLab AI PLUS is not to give customers more alerts or information, but to reduce the time it takes to identify, understand, and decide. AI implemented into AhnLab's engines and infrastructure improves detection accuracy, while AI agents support analysis, response, management and prioritization across the security platform.

With AhnLab's agentic AI, customers can automate and enhance security operations, improve efficiency and transform the entire security workflow.
